

Rosheeta Sheth

Industrial Engineering | Data Strategy, Analytics & Growth Insights | Atlanta, GA

470-277-0469 | rsheth48@gatech.edu | [linkedin.com/in/rosheeta-sheth/](https://www.linkedin.com/in/rosheeta-sheth/) | github.com/rosheeta-sheth | <https://twin-b6id.onrender.com/>

EDUCATION

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Industrial Engineering, Minor in Financial Technology

Aug. 2024 – May 2027

- Concentration: Analytics and Data Science, GPA: 3.91/4.00 | Honors: Zell Miller Award (Full Tuition), Dean's List
- Georgia Tech Lorraine: Summer 2025 Study Abroad at Georgia Tech's European Campus in Metz, France
- Coursework: Supply Chain Engineering: Logistics, Engineering Optimization, Data Input & Manipulation, Numerical Analysis, Database Systems, Regression & Forecasting, Machine Learning, Decision & Data Analytics, Simulation

PROFESSIONAL EXPERIENCE

Sunnyland Farms

Albany, GA (Remote)

Supply Chain Systems Optimization Intern – Georgia Tech Industry Partnership

June 2026 – Aug. 2026

- Evaluated existing data processes across QuickShip, Paccurate, and BigCommerce, documenting business logic and data requirements to identify inventory-data gaps, and proposed a cycle-count reconciliation process to reduce oversells during peak season
- Evaluated emerging technology platforms and automation options (robotics pilot, Robots-as-a-Service) for peak-season fulfillment, familiarizing with vendor solutions and benchmarking cost and ROI to enhance a leading eCommerce supplier's supply chain systems

TECHNICAL PROJECTS

ExpenseBot (AI Receipt & Expense Tracker) | *React, Flask, SQLAlchemy, Claude API*

May 2026 – July 2026

- Built a full-stack expense-tracking app (Flask/SQLAlchemy backend, React frontend) with JWT auth, integrating Google Cloud Vision OCR and Claude to auto-extract receipt data and generate confidence-scored categories

DishRadar (AI Restaurant Discovery & Recommendation App) | *React, Supabase, Claude*

May 2026 – July 2026

API, Google Maps

- Built a full-stack food-discovery app (Supabase backend, React frontend) integrating Claude and Google Places APIs to power an AI concierge chat, sentiment-based dish extraction, and quiz-personalized recommendations

Personal Career Agent | *Agentic AI, Python, OpenAI API, Gradio*

May 2026 – July 2026

- Built an agentic “digital twin” career chatbot grounded in personal career documents that autonomously answers questions about my background and experience
- Implemented function-calling tools that log unanswered questions and capture interested visitors' contact details via push notifications, deployed as an interactive Gradio web app

AI Equity Traders (Multi-Agent System) | *OpenAI Agents SDK, MCP, Python*

May 2026 – July 2026

- Architected an autonomous multi-agent equity-trading simulation in which trader agents with distinct strategies research markets and execute simulated trades
- Integrated multiple Model Context Protocol servers as agent tools for market data, trade execution, and portfolio tracking, then surfaced results through a real-time Gradio dashboard

Multi-Agent Engineering Team | *CrewAI, Python*

May 2026 – July 2026

- Built a collaborative software “engineering team” of role-based agents using CrewAI that turn a single requirement into working, tested Python code
- Orchestrated autonomous hand-offs across engineering lead, backend, frontend, and QA agents to design, implement, and test a functional full-stack application end-to-end

Energy Inefficiency Prediction & Prioritization | *Python, Scikit-learn, Pandas, Excel*

Jan. 2026 – April 2026

- Developed Random Forest and Gradient Boosting models across 3 data sources, including structural, geographic, and climate data, to predict building energy usage
- Built a ranking framework that flagged the top 25% highest-energy buildings, prioritizing retrofit and resource-allocation decisions

SKILLS

Data & Business Tools: Excel (Pivot Tables, VLOOKUP/XLOOKUP), Power BI, Tableau, Google Sheets, PowerPoint, Word, Data Strategy, Process Evaluation, Requirements Documentation

Programming & Data: Python, SQL, R, MySQL, Pandas, NumPy, scikit-learn

Machine Learning: Regression, Classification, Random Forest, Gradient Boosting, Time Series Forecasting, NLP / Word2Vec, PCA, K-means, Feature Engineering, Predictive Modeling

Agentic AI & LLMs: AI agents, multi-agent systems, agentic workflows, function-calling / tool use, MCP, OpenAI Agents SDK, CrewAI, LangGraph, AutoGen, Gradio, OpenAI / Anthropic / Gemini APIs

Visualization: Matplotlib, Seaborn, Plotly, Git/GitHub, Simio, HTML/CSS

LEADERSHIP & ACTIVITIES

ATL Tamasha | *Logistics Chair*

Jan. 2026 – Present

- Coordinate venue, vendor, and team scheduling logistics for a 16-team, 480-dancer collegiate dance competition at an 850-seat venue, negotiating sponsors/vendors and producing logistics documentation for a 75+ person board, staff, and liaison team
- Lead day-of event execution and troubleshooting for a ticketed event generating \$16,500+ in revenue
